## Autonelli Bros. BEGONIA GARDENS

# BEGONIA GARDENS 

COMING FROM SANTA CRUZ TURN TO RIGHT ON FIRST SIDE ROAD PAST CITY LIMITS.

COMING FROM WATSONVILLE TURN LEFT AT 41ST., THEN RIGHT ON CAPITOLA ROAD.

Nursery Located 3 Miles East of Santa Cruz, l Block East of Live Oak School, on Capitola Road. Mailing Address:

ROUTE 2, BOX 252. SANTA CRUZ, CALIFORNIA

Breeding Stock of Tuberous Begonias are at their best during July and August.

5 acres of Lath Houses with thousands of seedlings are in full Bloom August and September.

Gloxinias are also at their pest from June through August.

Transvaal Daisies and Delphiniums are in Bloom in Spring through Summer.

Polyanthus Primrose are at their best in March.

\section*{THE CULTURE OF TUBEROUS ROOTED BEGONIAS FROM SEED TO THE TUBER}

SEED: We sow seed from December 15 until March. Best results are obtained from February sowing. Sow seed in a well drained flat, with about one and one half inches of well rotted leaf mould. Firm the corners and sides of flats, and level. Screen a fine layer over the surface, through a fine screen. Sow seed and water well with a fog like sprayer, cover with glass and darken with paper until germination. With a temperature of from 60 to 70 degreas it will take from 8 to 10 days for germination, \(a_{3}\) soon as the seed shows small white specks remove the paper, after two or three days they will show small plants, remove glass and keep moist.

We sterilize our soil with steam to kill all weed seed and fungus and water with sterilized water until the third leaf shows on the small plants, then water with fresh water for fifteen to twenty days before transplanting in other flats.

TRANSPLANTING: Best mixture for transplanting, use \(2 / 3\) well rotted leaf mould, \(1 / 3\) light top soil with a light application of well rotted manure mixed thourghally together.

PLANT one inch apart, when crowded, transplant into other flats. In five to six weeks they will be ready for seven inch pans or planted out in the garden about 8 or 9 inches apart. Plants should be planted where they have
plenty of fresh air and light but no strong sun or strong wind. Such as the north side of building, under a tree, on an open porch or well ventilated sun room. A lath house is ideal.

FEEDING: When plants are well established, feed with Fertilizer Emulsion which can be purchased at most seed stories and nurseries. Easily followed Directions on each bottle, or you may feed with Fish or Cotton Seed Meal. When feeding with the latter two dig a small trench around each plant and sprinkle one tablespoon of Meal and cover. Water well after feeding.

SEED sown in January and early February will start blooming in late July and be in full bloom in August until October, will start dying down in late November. You should then gradually take the water away from them. In December when the plants are quite yellow and falling apart dig, wash and put in the sun to dry, be sure all of the stem is out of the tuber, but don't break it off as this may injure the Tuber. Wait until stem is cured well enough so that a light pull will remove the stem. Dry well where the stem came out of the tuber in the sun and store away in a cool dry place for the winter. In years of early rainfall there is danger of losing your tubers by rottening. In this case dig and place in trays until plants are sufficiently cured were a slight pull will remove stem from tuber.

\section*{TUBEROUS ROOTED BEGONIAS CHOICE SELECT}

\section*{CHOICE SELECT}

Each Season when in bloom we select and mark the choicest seedling plants in our lath houses for those who want the best in Begonias.

We are not selecting the Rose Type separately from the Camellia Type. When you order Double Camellia Choice Select, you will receive a good percentage of Rose Type and possibly a few Double Ruffled type. If you desire your Begonias to be Double

Ruffled type, please specify Double Ruffled Type when you order. We will slect your order from the crosses that are predominately Double Ruffled.

In this way we can keep our prices moderate.

Choice Select come in all the types and colors on Page 7, with the exception of the single varieties.
\begin{tabular}{lrrc}

Large & .70 & \(\$ 7.00\) & \(\$ 56.00\) \\
Medium & .55 & 5.50 & 44.00
\end{tabular}

\section*{GROWING HINTS}

Never plant tubers before a sprout appears, always start your begonias in black California Peat if possible, (Cal Peat can be used) remember that the better the root system the finer the plants. If you are unable to secure Peat use a mixture of \(2 / 3\) Leaf Mould and \(1 / 3\) sand thoroughly mixed together.

Be careful of your watering while in
trays and in the early stages after potting water thoroughly after planting then be sure soil shows dryness before watering again.

When Begonias are in full bloom apply fertilizer emulsion every 2 weeks for 2 or 3 applications, this will give you a longer blooming season with better flowers.

\section*{DROPPING OF BUDS}

The three main causes of the flower buds dropping are overwatering, too dence of shade and lack of air.

Begonias although hardy and easily grown under favorable conditions are very tempermental to the above:

Begonias will not grow indoors. If your plants are tall with large leaves and no blossoms you lack sufficient light. If you cannot remedy this you should remove plants to a less shaded location.

The most cases of overwatering is when Begonias are first potted or planted in the garden. Condition of your soil is important, unless under
very sandy conditions do not use Peat in preparing your garden bed. When potting, have broken Pottery in bottom of Pot. Never use Peat in Potting mixture. Water thoroughly after first planting then never water until soil shows dryness.

\section*{PESTS}

The two most common pests of Begonias are the Caterpillar that eats the leaves and the snail that likes to live among the foilage. Caterpillars are best controlled by picking off. For snails use bait in pellet form sold comercially for that purpose.

\section*{GLOXINIA SEED AND TUBER CULTURE}

Gloxinia Seed and Tubers are very similar to the Begonias, but with a few exceptions the Gloxinia is a house plant and when the plant dies down
the Tuber should be put in flats with moist mixture until it starts to grow then re-pot.

\section*{DELPHINIUM SEED AND PLANT CULTURE}

Delphinium seed sown in June and July for early spring blooms. December and January for mid-summer blooms. March for fall blooms. We sow seed in flats of \(2 / 3\) leaf-mould \(1 / 3\) light top soil mixed. We use flats 3 inches deep quite full and cover seed lightly so the seed is just covered with same mixture. Water well and keep dark until germination starts, put in semi shade for full germination and leave until third leaf is formed well on the plants harden in full sun-lite for a week and tranplant 3 or 4 inches apart if in flats. Mixture of half leafmould and half light sandy top soil.

Preferably in beds of light soil with a little barnyard manure mixed in. Give them a semi shade for about a week give them full sun-lite for about 5 to 6 weeks, then they are ready for permanent location. Plant from 2 to \(21 / 2\) feet apart in full sun-lite.
Strong Delphinium Seedlings ready for shipment March and April for midsummer blooms. June and July for Fall blooms. September and October for Spring blooms.

\section*{BEGONIA SEEDLINGS READY FROM APRIL UNTIL JUNE}

All colors and types as shown on next page. These seedlings are strong twice transplanted plants ready to be planted in permanent place in the Garden or Potted in 7 inch pots. They can be shipped to all parts of the United States.

\section*{STARTING AND GROWING OF LARGE AND MEDIUM SIZE TUBERS FOR POTTING}

Begonia Tubers should never be started until they show a sprout, then plant in flats of peat so the bulb is just covered. Water well, put in dark warm place until about 2 inches high then give them light. When plants are about five inches high they are ready for potting. Care should be taken not to plant Begonias in too large a container. A \(11 / 2\) inch Tuber requires an 8 inch pot, a 2 inch Tuber should be planted in a 10 inch pot.

In potting all types excepting hanging basket, you should leave but one shoot to each tuber, break all other shoots off at the tuber. The hanging baskets, you should leave all shoots,
because the more shoots you have the better formed baskets. Some of the larger flowering baskets grow with just a few shoots, it is best to pinch the tops of these so they will throw more branches.

In potting in eight inch pots mix 2 table spoons of fish meal in the bottom third of pot, the ten inch pots use 3 table spoons, 7 inch pots for seedlings or small bulbs use 1 table spoon. In this way the plants will start feeding when they are ready to bloom. Best potting mixture, well rotted leaf mould 1/6 cow manure mixed and rotted together then add one third light top soil.

\section*{CALLA LILLIES}

TYPES AND COLORS SUMMER FLOWERING
Yellow Calla - (Elliottiana Spotted Leaf
Pink Calla - (Rehmanni)
Summer White Calla - (Maculata) Spotted Leaf

READY IN NOVEMBER
each doz.
Price \(\quad .35 \quad \$ 3.50 \quad \$ 26.00\)
The Callas as described above are all summer blooming Calla Lillies, they can be planted in full sunlight or part shade, they can be grown in all types of soil, although a well drained sandy loam is prefered. Leave
in ground for three years then dig and seperate as the bulb will multiply, plant in spring when all danger of heavy rain fall is over.

\section*{WINTER AND SPRING FLOWERING CALLA LILLIES}

Large White Calla - (Aethiopica)
Small White Calla - (Godfrey)
Black Calla - (Arum Pictum) each doz. 100
Price \(\quad .35 \quad \$ 3.50 \quad \$ 26.00\)
Ready in July and August. Culture is the same as Summer blooming Callas with the exception that bulbs should be planted in Fall or in early pring in severe climates.

CARRIAGE
SEEDS . . . BULBS . . . Are sent prepaid.
PLANTS . . . Are shipped by Express. Carriage charge palable by purchaser. Please print or write your orders plainly and it writing us use separate sheet of paper.
TUBERS and PLANTS are charged at unit prices if labelled separtely as to color, etc. If assorted at dozen rate will be shipped assorted.
All stock guaranteed true to description but no guarantee for the result of growing over which we have no control.

\section*{1948 INTRODUCTIONS}

HANGING BASKET PINK NO. 4
Carnation Type, flowers from \(31 / 2\) to \(4^{\prime \prime}\) in diameter. Color light Pink with White center. Basket Pink No. 4 is the most prolific bloomer of all Baskets, over 500 flowers at one time is not unusual on a well grown plant.

Medium to Large Tubers - Each \(\$ 3.50\)

HANGING BASKET PINK NO. 10
Ruffled Camellia type, flowers 4 to \(5^{\prime \prime}\) in diameter of Pink Salmon color. Flowers in late season, flatten and make very effective Basket. The 1947 favorite.

Medium to Large Tubers - Each \(\$ 5.00\)

HANGING BASKET PINK NO. 10
Scheduled for introduction in 1950. Due to the tremendous acclaim it has created we offer it this year in limited number to those who want the last thing in Hanging Baskets.

Formal Rose Type flowers from 5 to \(6^{\prime \prime}\) in diameter of pure Pink color. Carries its form to the last flower. Has never been displayed outside our own Greenhouses.

Medium to Large Tubers - Each \(\$ 25.00\)

\section*{HANGING BASKET ROSE NO. 4}

Crimson Rose Color - Carnation Type.
Medium to Large Tubers - Each \$15.00

HANGING BASKET WHITE NO. 11
Pure White - Gardenia Form
Medium to Large Tubers - Each \(\$ 15.00\)

DOUBLE CAMELLIA PINK SALMON NO. 1
A vigorous grower. Plants attain 3 feet and more in height. Flowers of pure Pink Salmon color 7 to \(9^{\prime \prime}\) in diameter. A truly beautiful speciman plant.

Medium to Large Tubers - Each \(\$ 3.50\)

DOUBLE CAMELLIA WHITE NO. 20
Large pure White, Rose Type flowers. Supply Limited.
Medium to Large Tubers - Each \$5.00

All introductions are propagated by cuttings from our Breeding Stock.
In ordering from this page please give Type, Color and Plant Number.

\section*{HANGING BASKET}

Specimen plant of Tuberous Rooted Begonia Hanging Basket. These plants attain 3 feet in diameter and up to 1,000 blooms at a time. Can be grown out doors in any sheltered place, protected from direct sun and strong wind.
